

## **Graphene Flagship: working together to combine scientific excellence and technological impacts**

**Jari Kinaret**

Chalmers University of Technology, Sweden

Future and Emerging Technology Flagships are science-driven, large scale federated research initiatives financed by the European Commission and the EU member states. I will discuss one flagship proposal that targets a ten year program with focus on graphene and related two-dimensional materials. In this talk I will focus on the motivation, goals and implementation of the proposed flagship in the initial phase and over the ten year period. The more technical aspects will be covered by the subsequent presentation of the scientific and technological roadmap.
