

Overview of 2D Nanomaterials Research in India

A K Sood

Department of Physics,
Indian Institute of Science,
Bangalore 560012, India

I will present an overview of the work being done in India in the field of 2 D nanomaterials .The work in Nanoscience picked up momentum in India after the Nanomission Project was launched a few years back by the Department of Science and Technology of Government of India.The funding support under the Nanomission project has contributed towards creating many groups in different institutions working on different themes .Even though there is no dedicated center in India so far on 2D materials , there are individual scientists and groups focusing on the physical ,chemical and biological aspects of graphene produced by different methods and other 2 D materials . I will attempt to summarize this work done in different Institutions in India.
