A post-doctoral position is open in the group of Marinella Mazzanti with possible starting dates July-September. The candidate should be familiar with lanthanide chemistry or have a strong background in coordination chemistry. He should be at ease with the synthesis of organic ligands and main characterization tools (such as solution NMR). The candidate will be asked to develop new lanthanide based polymetallic architectures and to study their photophysical properties.

Applications including CV and two recommendation letters should be sent by email to M. Mazzanti:
